6. Magnet AXIOM-

Magnet AXIOM itself isn't just a simple E01 file reader. It's a comprehensive digital forensics software suite design for in-depth analysis of digital evidence. However, Magnet AXIOM does have functionalities to open, process, and analyze E01 files.

Steps to View E01 Files by Using Magnet Axiom

1. Download and Launch Magnet AXIOM software.
2. Navigate your E01 file via Go to "**File**" > "**Add Evidence**" > "**Disk Image**" and choose your E01 file.
3. Now the E01 file will display in the Case Explorer section.
4. Then double-click on the file name to open and view the file.
5. You can also use AXIOM's features for detailed analysis like, keyword search, timeline, and carving.
6. Finally, Generate reports to make a document on your analysis.

https://www.xploreforensics.com/blog/e01-file-viewer.html

Main features of Using Magnet Axiom Software

- Directly acquire the evidence from a physical drive and make an E01 image of that file. You can also import an existing E01 file.
- Supports a wide range of file systems like NTFS, HFS+, and Ext. which helps to find the structure of the E01 file.
- Designed to handle large and complex investigations. It also offers scalability to manage numerous E01 files.

Fred - *2023-04-10*

Hello, everyone.

My situation is like this:
Last year, I created a bunch of VeraCrypt containers.
They have been stored on an external hard drive that hasn't been used very much since then (but may have been short on empty disk space for a while).
Yesterday, I could decrypt and open all but one of my containers. (The error message I get is the same as when I enter an incorrect password for a functional container.)

What is your guess. Has the container been corrupted, or have I simply forgotten my password? Could anything be done in the corruption case?

Thanks in advance.

RealTehreal - *2023-04-10*

Hey there. You could try to mount the volume using the backup header (it's a mount option). If that won't help, the volume is either utterly damaged (both main and backup header damaged) or you simply forgot the credentials.

In case of damaged headers, the only way to still get access to the volume would be using a header backup. But you would have had created it before the headers got corrupted.

Greets

Fred - *2023-04-10*

Thank you for your quick reply.
I did make a few attempts restoring the embedded backup header, to no avail. But just to be clear, such a header would have been automatically created along with the container, right?

Corrupted (?) file container - Need suggestions on how to recover

Forum: Technical Topics **Creator:** AdamKoziol **Created:** 2017-02-14 **Updated:** 2017-06-17

AdamKoziol - *2017-02-14*

Hello,

I am unable to access 300GB encrypted file container on a 500GB USB HDD (MBR and single NTFS partition). The container most likely is also NTFS. It was created with VeraCrypt version 1.17 and always worked flawlessly. I am sure of the password. Later I also started trying accessing it with VC version 1.19. The container is standard (not hidden), has no PIM, no keyfiles and I do not have backup header extracted. I tried various ways and combinations of mounting it - as read-only, as removable medium and using backup embedded header. No luck. Later I tried running chkdsk /r /f /x and HD Tune 2.55 (slow) Error Scan on the drive, but no issues were found. The error I am getting is:

Operation failed due to one or more of the following:
Incorrect password.
Incorrect Volume PIM number.
Incorrect PRF (hash).
Not a valid volume.
Source: MountVolume:7763

What are my other options to try getting into that thing?

What happened? File corruption without any traces?

I don't think I even have to say that I am really determined to get to my files.

Thanks and best regards,
Adam

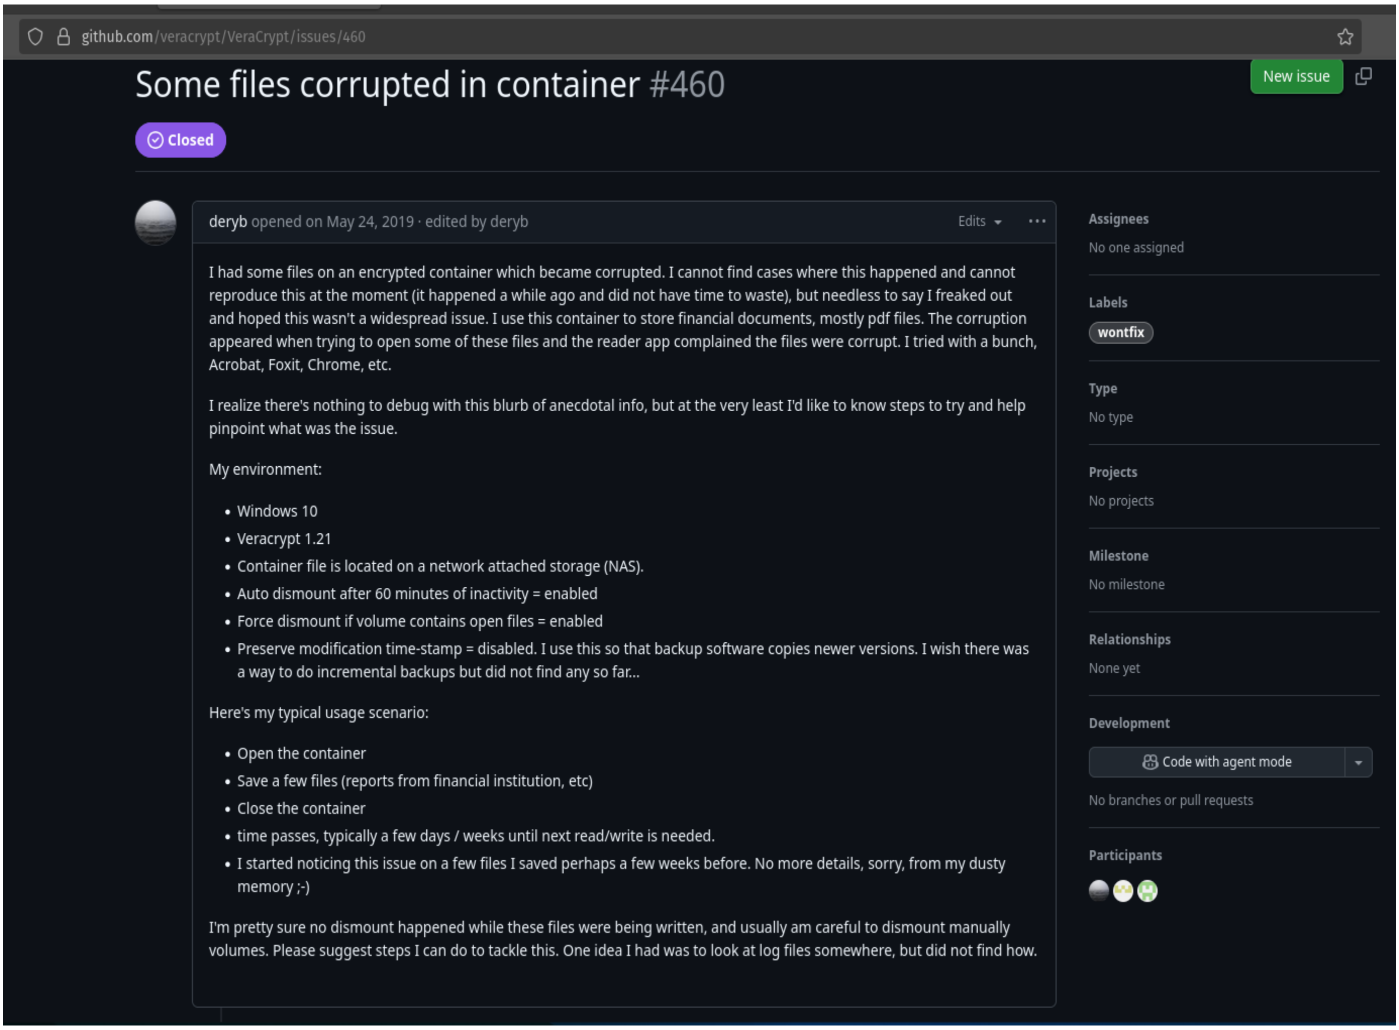
Last edit: AdamKoziol 2017-02-14

Alex - *2017-02-14*

Keys are in first 128K and backup in last 128K of the container.

Select "Use backup header" tries last 128K.

Exhibit 7



Some files corrupted in container #460

deryb opened on May 24, 2019 · edited by deryb

I had some files on an encrypted container which became corrupted. I cannot find cases where this happened and cannot reproduce this at the moment (it happened a while ago and did not have time to waste), but needless to say I freaked out and hoped this wasn't a widespread issue. I use this container to store financial documents, mostly pdf files. The corruption appeared when trying to open some of these files and the reader app complained the files were corrupt. I tried with a bunch, Acrobat, Foxit, Chrome, etc.

I realize there's nothing to debug with this blurb of anecdotal info, but at the very least I'd like to know steps to try and help pinpoint what was the issue.

My environment:

- Windows 10
- Veracrypt 1.21
- Container file is located on a network attached storage (NAS).
- Auto dismount after 60 minutes of inactivity = enabled
- Force dismount if volume contains open files = enabled
- Preserve modification time-stamp = disabled. I use this so that backup software copies newer versions. I wish there was a way to do incremental backups but did not find any so far...

Here's my typical usage scenario:

- Open the container
- Save a few files (reports from financial institution, etc)
- Close the container
- time passes, typically a few days / weeks until next read/write is needed.
- I started noticing this issue on a few files I saved perhaps a few weeks before. No more details, sorry, from my dusty memory ;-)

I'm pretty sure no dismount happened while these files were being written, and usually am careful to dismount manually volumes. Please suggest steps I can do to tackle this. One idea I had was to look at log files somewhere, but did not find how.

JohnRambo - *2020-09-22*

Well, disaster struck. As always.

I have a veracrypt container that gets regularly updated. Then this file is periodically copied to two external hard drives for backup purposes.

Yesterday I was going to do that regular updating... the container wouldn't mount. Fuck. Went to my backups to try these copies... turns out both won't mount either... that is interesting since these backups were made right after the last update.

Suspecting hardware failure, I then calculated the file hash for these three copies. The latest one was bound to be different as it has been updated since the last backup.... but BOTH backup files have different hashes... I probably got bit by a bad memory stick that corrupted the data while copying to the external hard drives... No data recovery of the previous files is possible, data recovery tools can't pick up anything on the hard drives.

Now, I tried mounting all three copies with the "Use backup header" option, but no luck. Reading up a bit, it looks like the first 512 bytes of the container have all the relevant data, while the last 256 bytes have the backup header. On all three containers these sections are the same... Is it possible that the containers wouldn't decrypt with the headers intact due to the data in between being corrupted? I know the hash function and the encryption scheme I used when creating the container. No PIM was used.

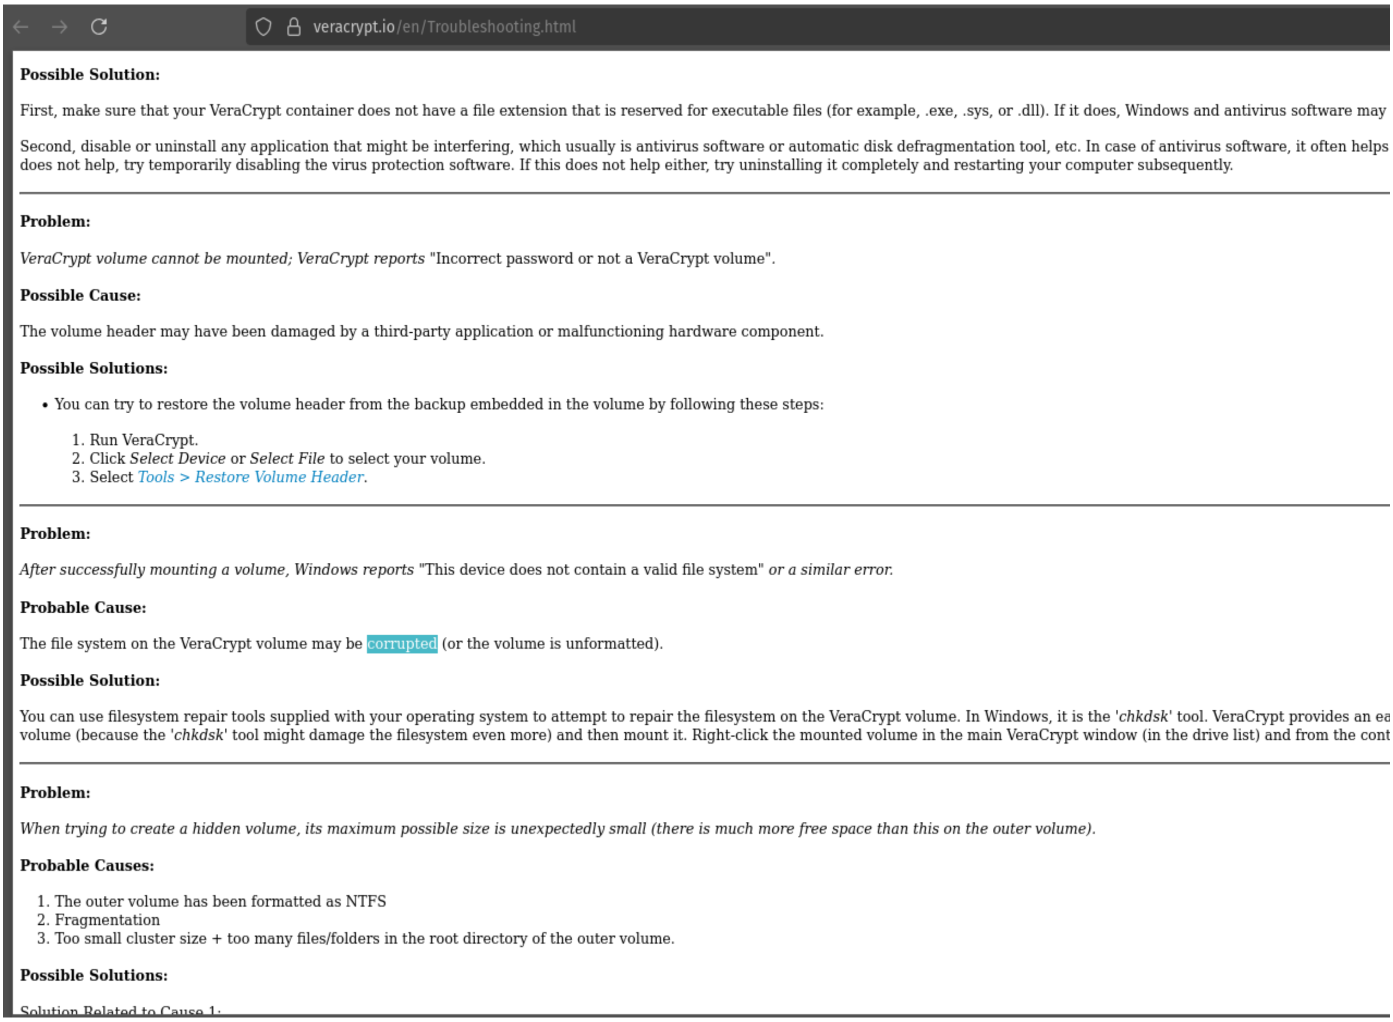
Is there any way to try to reconstruct the file with both backup copies to eventually end up with the correct file? Looking for differences between both files with a hex editor shows different data here and there, but mostly the same throughout. No easy way to do this I guess...

In case a bit flipped in my mind and forgot the password, I've already tried permutations of my password (four words + two numbers and three symbols at the end that I use everywhere, we all have these patterns), with hashcat and a mounting script that goes through a list of candidate passwords on all three copies, no luck either.

Now, if the headers are intact, it SHOULD decrypt, but it doesn't. I'm at a loss. Should I kiss my data goodbye? Any ideas?

Last edit: JohnRambo 2020-09-22

Exhibit 9



Possible Solution:

First, make sure that your VeraCrypt container does not have a file extension that is reserved for executable files (for example, .exe, .sys, or .dll). If it does, Windows and antivirus software may

Second, disable or uninstall any application that might be interfering, which usually is antivirus software or automatic disk defragmentation tool, etc. In case of antivirus software, it often helps does not help, try temporarily disabling the virus protection software. If this does not help either, try uninstalling it completely and restarting your computer subsequently.

Problem:

VeraCrypt volume cannot be mounted; VeraCrypt reports "Incorrect password or not a VeraCrypt volume".

Possible Cause:

The volume header may have been damaged by a third-party application or malfunctioning hardware component.

Possible Solutions:

- You can try to restore the volume header from the backup embedded in the volume by following these steps:
    1. Run VeraCrypt.
    2. Click *Select Device* or *Select File* to select your volume.
    3. Select *Tools > Restore Volume Header*.

Problem:

After successfully mounting a volume, Windows reports "This device does not contain a valid file system" *or a similar error.*

Probable Cause:

The file system on the VeraCrypt volume may be corrupted (or the volume is unformatted).

Possible Solution:

You can use filesystem repair tools supplied with your operating system to attempt to repair the filesystem on the VeraCrypt volume. In Windows, it is the '*chkdsk*' tool. VeraCrypt provides an ea volume (because the '*chkdsk*' tool might damage the filesystem even more) and then mount it. Right-click the mounted volume in the main VeraCrypt window (in the drive list) and from the cont

---

Problem:

When trying to create a hidden volume, its maximum possible size is unexpectedly small (there is much more free space than this on the outer volume).

Probable Causes:

1. The outer volume has been formatted as NTFS
2. Fragmentation
3. Too small cluster size + too many files/folders in the root directory of the outer volume.

Possible Solutions:

Solution Related to Cause 1:

Recover encrypted container files from corrupted drive

Asked 5 years, 1 month ago Modified 5 years, 1 month ago Viewed 1k times

0

I have got 2 container files(~400GB, ~100GB)(encrypted veracrypt containers) on my hard drive mixed with oder regular files on an ntfs partition. Today my drive wasn't recognized any more and it said there is damage. I couldn't work it out. Then I tried "ease us partition master"(program) and it somehow get back my partition. The regular files work. I tried to mount both my containers but it didn't work. Then I tried to recover header and at that point I realised that in my explorer both container files are listet as 0kb file size(NOT over 500GB). What can I do? I guess the program did mix up something how can I recover my container files?Or better: the previous versions of the container files(~400GB, and ~100GB)? Any possibility? These files in the containers are important. I hope there is any chance to recover. TIA

update: ok I gave up on those containers. in these containers were files of an old win 7 pc. before I formatet the win 7 pc to a fresh linux machine I saved the files in these containers. I did now a ddrescue copy (IMG file) of the hard drive sda in linux. on this fresh linux install were not that much files and most of the hard drive is empty. maybe I can recover from this ddrescue IMG file?

If they're *very* important, you might try commercial data recovery, at considerable expense. *Do not* attempt more DIY recovery... the best programs have a fairly low success rate. Best bet is to restore from your last disk image. – DrMoishe Pippik Jun 28, 2020 at 3:48

problem opening a vault / vault corrupted?

Help

toonace Jun 2018

Hi everyone,

I'm using cryptomator with a pcloud account and am experiencing some problems with one of my vaults (no problem with other ones).
I access my vaults through 3 methods :

- with my Android device (cryptomator app) with a WebDAV connection
- with the windows cryptomator interface (on windows 10), using I guess the windows WebDAV
- with cyberduck - WebDAV again- because there is a problem with large files with windows WebDAV.

I can access my vault trough the windows 10 cryptomator interface, but with Android, it says " WebDAV could not be authenticated" and with cyberduck, it doesn't recognize it as a vault, and show me the encrypted files (the masterkey, etc…)

Any idea of solving this issue ?

Thanks a lot for your help

anon24105312 Jun 2018

There were definitely problems with Pclouds WebDAV last week, my Synology drive and

☑ Corrupted File Recovery

Help os:windows

Brainstatic 1 Dec 2021

I've been using Cryptomator for four months now, and it's been a wonderful experience. I have no corrupted files, I'm just curious about what the recovery process would be should I ever run into such an issue.

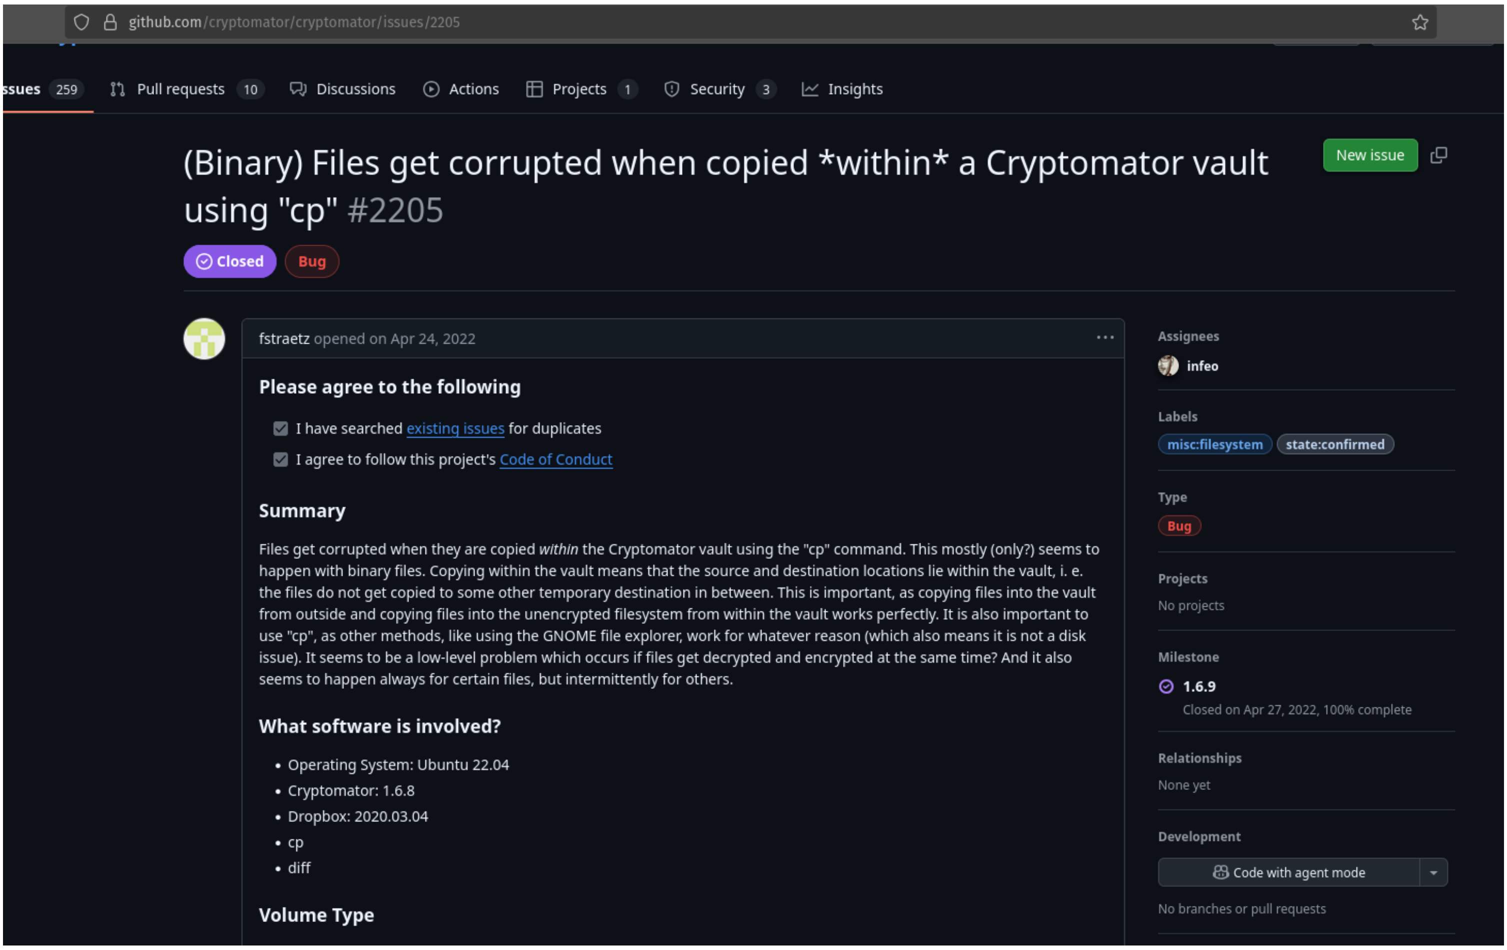
Let's say I have a Cryptomator vault stored on external media. I mount the vault and add a file named Image.jpg. As a result of a single-event upset, a bit is flipped as (or after) the encrypted version of the file is being written to the disk. This means that on any subsequent decryption attempt of Image.jpg, the checksum match fails. By design, Cryptomator will show that the file exists, but will not read the mismatched file: there's always the possibility that the file was tampered with maliciously. All other files which pass the checksum match can still be read as normal (a major security advantage of file-based encryption over monolithic vaults like VeraCrypt).

I have tested the behavior described above by intentionally modifying a single character of an encrypted file in Notepad++. My question is: how would I go about recovering Image.jpg? The vault health check in the Windows client reports no errors. The sanitizer 24 hasn't been updated in two years and doesn't seem to work with the latest vault format (Exception in thread "main" java.lang.IllegalArgumentException: Unsupported vault version 999).

If the header was corrupted the file would understandably be unrecoverable, but this is statistically unlikely with a 5 MB JPG. A single bit flip in an unencrypted image of this size would probably not even be noticeable in most cases. For the record, I do keep backups. But still, is there any way to attempt a recovery of a file like this?

> Solved by infeo in post #5
>
> You can't do this over the CLI either. Right now one would need to implement/program this themself.

Exhibit 13



(Binary) Files get corrupted when copied *within* a Cryptomator vault using "cp" #2205

Closed Bug

fstraetz opened on Apr 24, 2022

Please agree to the following

- ☑ I have searched existing issues for duplicates
- ☑ I agree to follow this project's Code of Conduct

Summary

Files get corrupted when they are copied *within* the Cryptomator vault using the "cp" command. This mostly (only?) seems to happen with binary files. Copying within the vault means that the source and destination locations lie within the vault, i. e. the files do not get copied to some other temporary destination in between. This is important, as copying files into the vault from outside and copying files into the unencrypted filesystem from within the vault works perfectly. It is also important to use "cp", as other methods, like using the GNOME file explorer, work for whatever reason (which also means it is not a disk issue). It seems to be a low-level problem which occurs if files get decrypted and encrypted at the same time? And it also seems to happen always for certain files, but intermittently for others.

What software is involved?

- Operating System: Ubuntu 22.04
- Cryptomator: 1.6.8
- Dropbox: 2020.03.04
- cp
- diff

Password not working

Help Desktop App os:linux

Robbo May 2019

Using Ubuntu 16.04 have the vault backed up in dropbox.

First created my vault on 16th Jan 2018. Been unlocking and storing files in it since.

Since March this year I am getting "wrong password".

Few things have happened, I did have the vault stored on an encrypted drive, and dropbox sent out a notice these were no longer supported, so I had to move my dropbox folder location.

I have checked and the file has not changed in dropbox since it was created.

It is possible I've forgotten my password, but i've been logging in ~once/twice a month since jan 2018.

What are my options? Can i run a cracking script with a mask?

Robbo May 2019

I should add, i have tried changing the settings regards webdav (although this is post decryption so I guess it doesnt matter).

I've also tried installing the version of cryptomator that would have been available jan 2018 still no luck

Cannot open my vault; password seemes incorrect, but it is not

Help

avdrgaag Mar 2019

Goog morning!

I have a question about a problem ragarding my encryped volumes.
My laptop has crashed, but I managed tot save almost all my data. My encrypted volumes are on an external HDD, so I did not worry.
But: This week I bought a new laptop and began installing the software that I need, including Cryptomator. And, as a satisfied user, I donated when $10.- 🙂
A few minutes ago I wanted to open my encryped volume, but Cryptomator first said it could not succeed and that I could look into the logfile. But I cannot find any log file in Cryptomator.
At the second attempt (and many attempts after that, 🤔 , Cryptomator says the password is incorrect. And I am 100% sure I use the correct password (I stored it in a safe place)
This problem occures with both my encrypted volumes. (Directories on my external HDD)

There is one thing that I have to mention: As user on my new laptop I am not the original owner of the files on my external HDD. I had to add myself (with admin-rights) as the owner of this external HDD. I did that on the highest level of the disk + all the levels beneith. But when checking the file "masterkey.cryptomator" I still was not the owner, so I took over the ownership via the properties of this file by adding myself again and giving myself full rights.
But I still cannot open / decrypt my volumes with Cryptomator.

How can I resolve this problem?

Looking forward to your reply.

Whith kind regards,
Anton van der Gaag
The Netherlands

Password not accepted after first mistake

Help Known Issues os:linux

SaverioB Mar 2019

I am using version 1.4.6 in Ubuntu 18:10, via AppImage.
I have the following issue, that I am able to replicate at any time.
If I launch the desktop app and enter the correct password, everything works as expected.
Once I enter a wrong password, then I am not able to unlock the drive anymore, even with the correct password.
I can solve the problem by just re-launching the app, and entering the correct password.

Please let me know if I can help to debug the issue. Thanks!

Basic Info

This is a bug report.

I'm using

- Windows in version: 7
- macOS in version: 10.11.6 (15G1217)

I'm running Cryptomator in version: 1.2.4

Description

I just started using Cryptomator on macOS and created a new vault (let's call it *VAULT1*) with a complex password. Right after creating the vault I could open the vault by entering the password. When I tried to unlock the vault after restarting Cryptomator it didn't accept my password and said it was wrong. So I deleted the vault and created a new one with the same name and password. Trying to open this vault after restarting Cryptomator, the same error occured. Next I tried changing the name of the vault but this didn't change the behaviour. So I created an additional vault that had the much simpler password 123 and a different name (let's call it *VAULT2*). After restarting Cryptomator I couldn't open *VAULT1*. So I tried to unlock *VAULT2* and it worked. Now I tried to unlock *VAULT1* again and suddenly it worked too. Note that I tried it several times and if I unlock *VAULT2* and lock it again I can unlock *VAULT1* without any problems. When I set *VAULT2*'s password the same as *VAULT1*'s password I can't open any of them after restarting Cryptomator. So there seems to be a problem with the password of *VAULT1* but the problem is solved when there is a second unlocked vault with a different password. Once *VAULT1* could be

Password no longer works?

Help

arijana Feb 2019

I'm using the Desktop App from my MacBook Pro, as are 14 others on my team. I get the error message "Wrong password" when I try to unlock a vault. I am confident the pwd is correct. At least, it used to work. The only thing I've done is rename the vault. Is this the problem? How do I solve it?

Many thanks.

tobihagemann Feb 2019

If it says "wrong password" then it actually is the wrong password. Did someone from your team change the password 1 ? If that's the case, is the vault inside a cloud storage where you can check if there is an older version of the `masterkey.cryptomator` file? If yes and there is an older version, you could restore the old version of that file and use that to unlock the vault with the old password. Make sure to make backups of the masterkey file before experimenting.

arijana Feb 2019

I'll give it a try, thanks.

ALL ABOUT
OUR BAND

Tactfully balancing the electric pace of math rock with the subtle intricaties of post rock, while simultaneously blending the oppressive suspense of dissonant choruses with engaging polyrhythmic riffing, Era of Peace is introducing a unique aggregate of contrasting melodies and rhythms. The group draws from extremely talented artists from a breadth of genres ranging from contemporary jazz to technical metal and everything inbetween. Artists such as Animals as Leaders, The Contortionist, Chon, Tool, Radiohead, Elos Arma, Portico, and several other bands have played a significant role inspiring the sound of Era of Peace.

Hi Seth,

I am a Sr. Recruiter for UPMC. I reviewed your impressive profile and thought you'd be a great person to network with for Software Engineering positions within our Enterprise divisions.

Specifically, I have needs for Sr. & Lead Software Engineers to assist with the creation of new innovations in the healthcare/medical field. We are seeking skilled professionals with experience in one or more of these areas - Java, C#, .Net, Ruby, JavaScript, SQL & mobile development

These are full-time positions based in Pittsburgh, PA.

Seth Aikens

Mar 19, 2015 ·

The saddest individuals I've ever met in life are the ones who couldn't care less profoundly about anything by any stretch of the imagination. Energy and fulfillment go as one, and without them, any satisfaction is brief, on the grounds that there's nothing to make it last... I'm driven by passion.

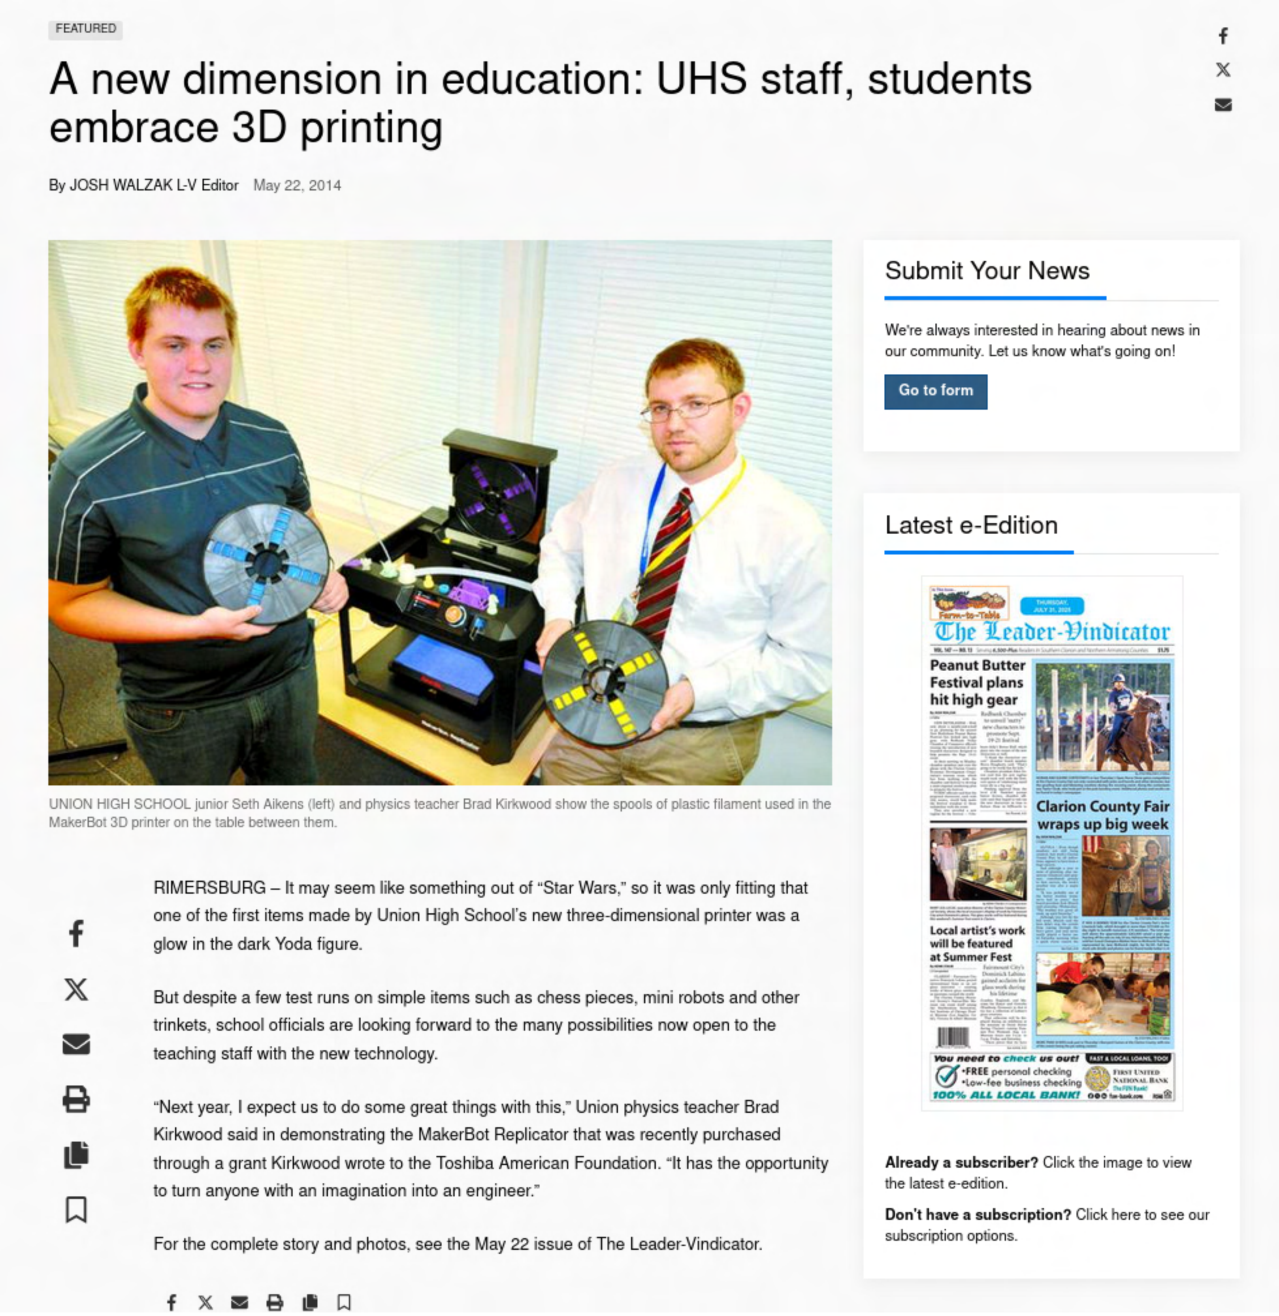
Exhibit 55



FEATURED

A new dimension in education: UHS staff, students embrace 3D printing

By JOSH WALZAK L-V Editor May 22, 2014

UNION HIGH SCHOOL junior Seth Aikens (left) and physics teacher Brad Kirkwood show the spools of plastic filament used in the MakerBot 3D printer on the table between them.

RIMERSBURG – It may seem like something out of "Star Wars," so it was only fitting that one of the first items made by Union High School's new three-dimensional printer was a glow in the dark Yoda figure.

But despite a few test runs on simple items such as chess pieces, mini robots and other trinkets, school officials are looking forward to the many possibilities now open to the teaching staff with the new technology.

"Next year, I expect us to do some great things with this," Union physics teacher Brad Kirkwood said in demonstrating the MakerBot Replicator that was recently purchased through a grant Kirkwood wrote to the Toshiba American Foundation. "It has the opportunity to turn anyone with an imagination into an engineer."

workforce is different. Our jobs are different. But, the way companies onboard, train, and develop their employees is falling behind.

Using 1Huddle, companies can convert existing training into quick-burst mobile games that are proven to onboard, upskill, and fire up your workers. Just imagine: All your training. In a game. On your phone.

We have clients across the globe and across business sectors, including: Audible, Loews Hotels, ESPN, Denver International Airport, Madison Square Garden, Golden State Warriors, PIMCO, and more.

Cool investors that know what their doing...including 500 Startups, NRD Capital, and Newark Venture Partners/

Featured on Fox News, CNN, Huff Post, CNBC, Bloomberg & The Wall Street Journal.

teachers, which save time and engage students.

QueueDr – A product that intelligently optimizes doctors' schedules to help them reclaim the $30 billion lost from missed appointments.

Quicklegal – Attorney On Demand – Via Video Chat.

Rapchat – Create, share, or discover freestyle raps.

Sales Huddle Group – Gamify your training.

Set Scouter Inc. – A marketplace that makes video production easy — starting with location rentals.

SimpliRoute – A service that optimizes routes for any company with multiples deliveries reducing fuel cost and time on route.

Sqoop – A service that helps journalists discover what's happening before it

Project Completion Signoff

February 13th, 2019
Craig Gentzler
6025 William Drive
Mechanicsburg, PA 16214
United States

RE: Development Agreement

RE: Contract Extension Agreement

Please take note of the following:

By signing this document, you certify that Red Thread Technology, LLC has successfully completed all the deliverables concerning your original work agreement and any change orders for the project. Any work requested beyond the signing of this agreement will need to be part of a new agreement or retainer.

Upon execution of this agreement a source code will be delivered within 7 to 14 business days via a USB Stick mailed to the above address.

The source code contains the following:

- Multi-Cross-Platform Project Source Code File(s)

This will need to be compiled in order to properly display all work(s) produced per discussion.

Breach of Contract Notice

October 7th, 2019

Marco Flores
Purest Form CBD
42525 Bradshaw Dr
Temecula, California 92592
United States

RE: Breach of Contract

Dear Marco Flores,

We have carefully reviewed all documentation, emails, server logs, GoDaddy communication and text messages.

We have had 3 companies review your SSL data and your website which to this date is still not completed.

PLEASE TAKE NOTICE that you are in breach of our contract titled "Credit Card Processing Integration Agreement" dated April 26th, 2019 (the "Contract"). Specifically, you have breached the following obligation(s) under the Contract:

Section: Exhibit 1

Description:

Marco Flores has failed to render a safe and secure platform to install a remote key change on inventory.purestformcbd.com in order to **use** payment & inventory services.

Marco Flores has failed to complete the website that was to be integrated shortly after services were paid for in order to **process** credit cards and **utilize** tax services.

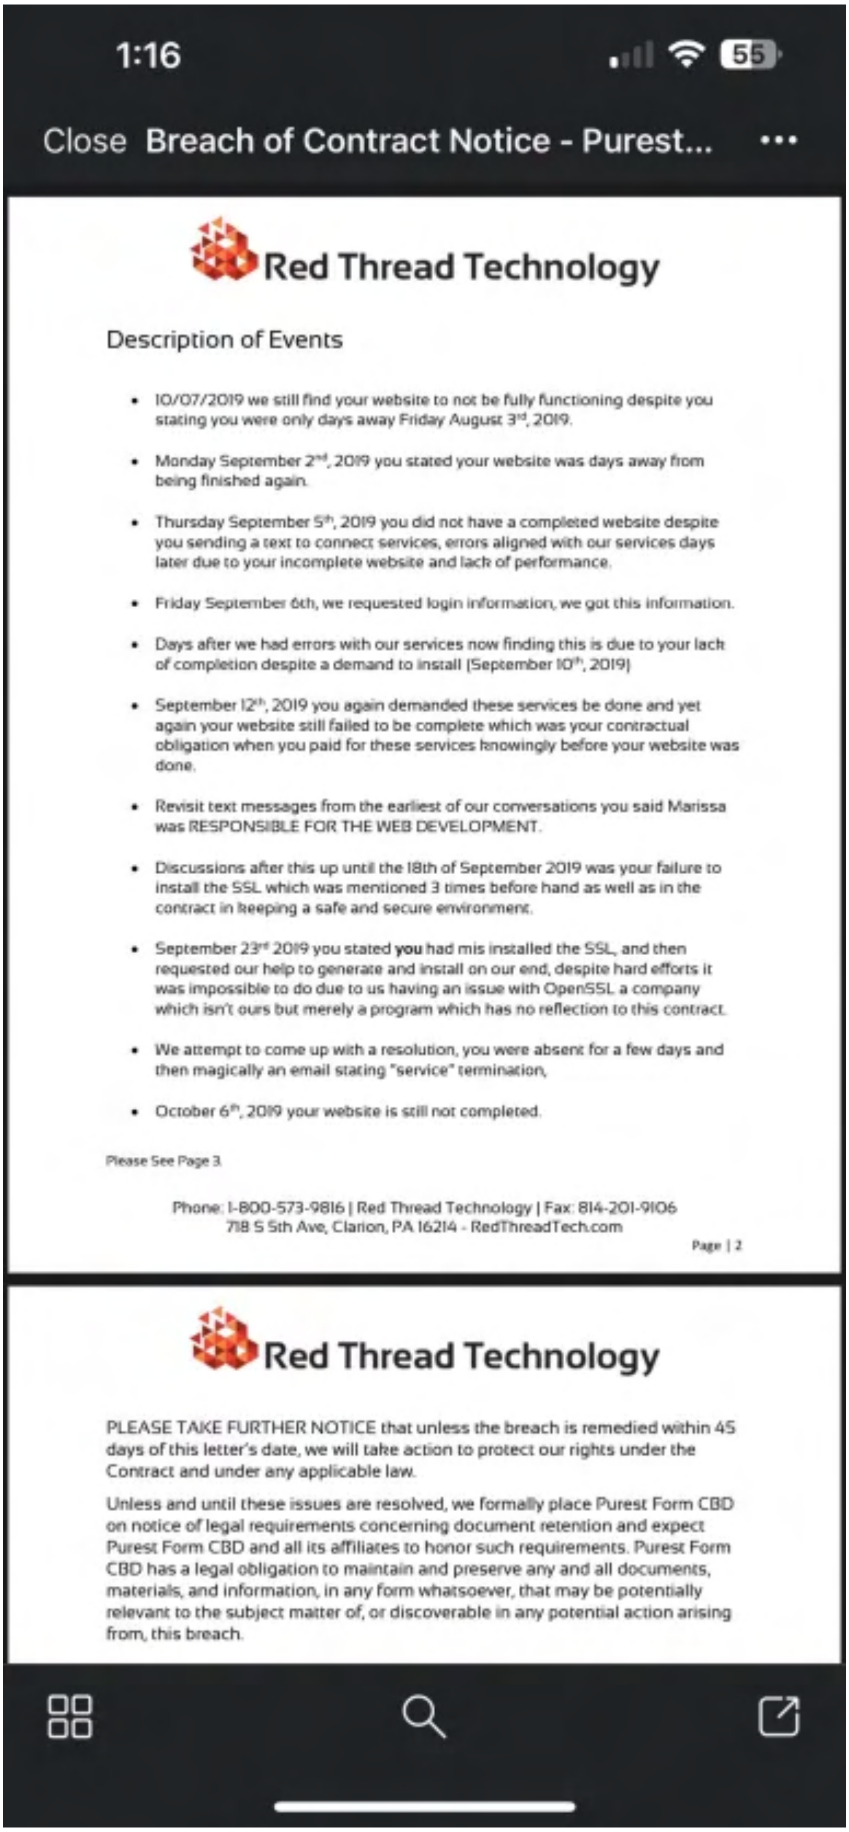
Please See Page 2.

Red Thread Technology

Description of Events

- 10/07/2019 we still find your website to not be fully functioning despite you stating you were only days away Friday August 3rd, 2019.
- Monday September 2nd, 2019 you stated your website was days away from being finished again.
- Thursday September 5th, 2019 you did not have a completed website despite you sending a text to connect services, errors aligned with our services days later due to your incomplete website and lack of performance.

Exhibit 78



Description of Events

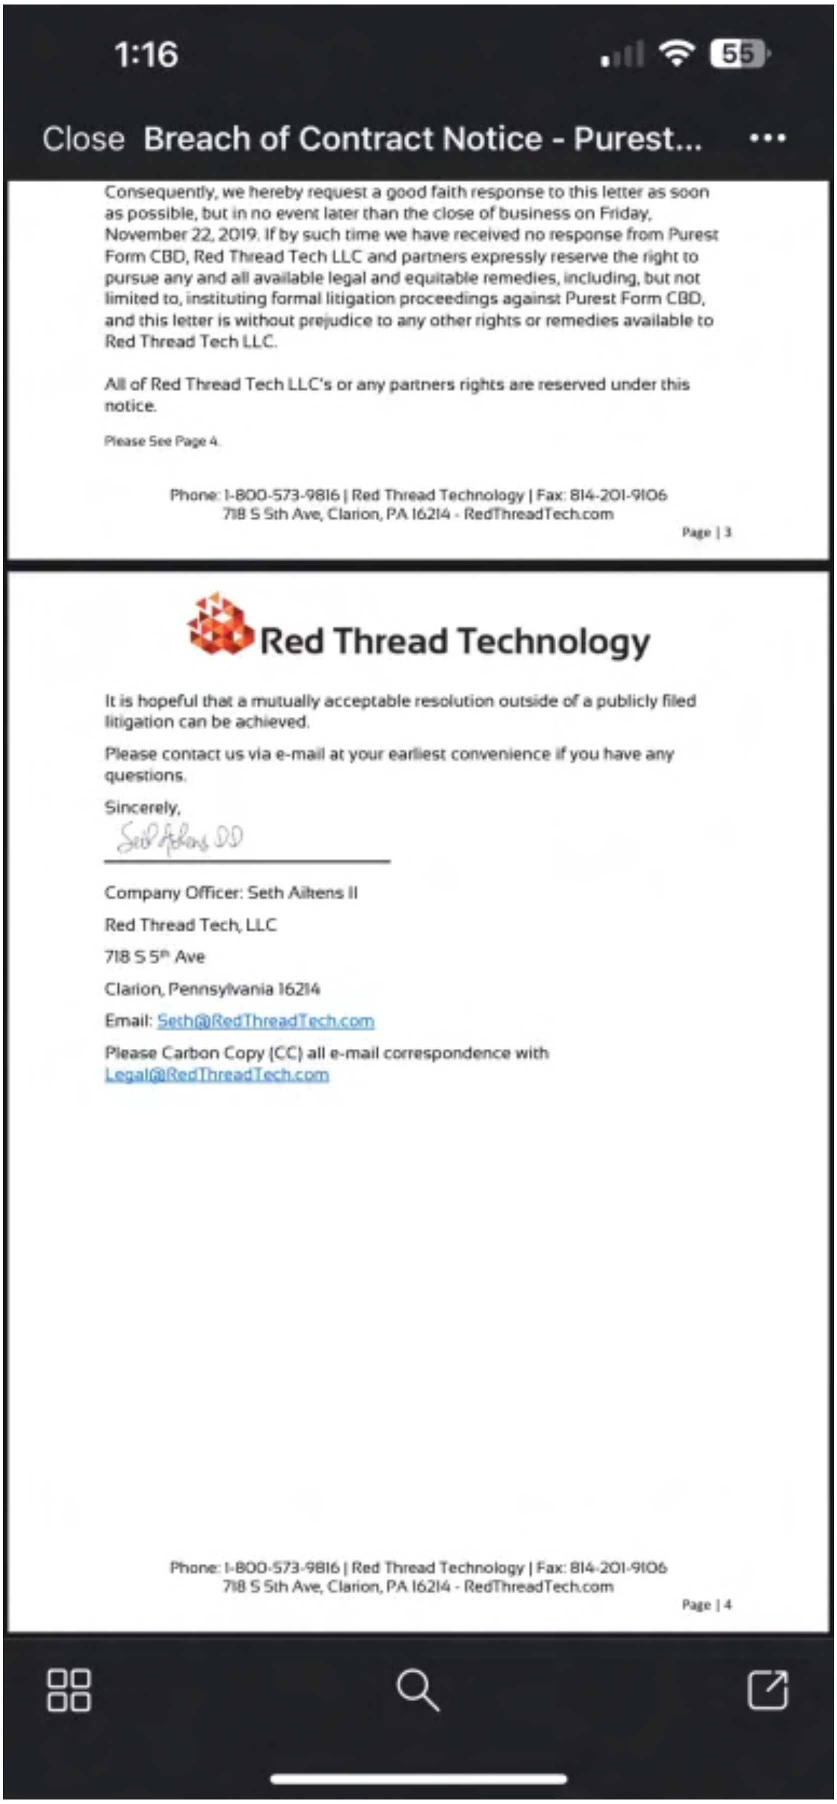
- 10/07/2019 we still find your website to not be fully functioning despite you stating you were only days away Friday August 3rd, 2019.
- Monday September 2nd, 2019 you stated your website was days away from being finished again.
- Thursday September 5th, 2019 you did not have a completed website despite you sending a text to connect services, errors aligned with our services days later due to your incomplete website and lack of performance.
- Friday September 6th, we requested login information, we got this information.
- Days after we had errors with our services now finding this is due to your lack of completion despite a demand to install (September 10th, 2019)
- September 12th, 2019 you again demanded these services be done and yet again your website still failed to be complete which was your contractual obligation when you paid for these services knowingly before your website was done.
- Revisit text messages from the earliest of our conversations you said Marissa was RESPONSIBLE FOR THE WEB DEVELOPMENT.
- Discussions after this up until the 18th of September 2019 was your failure to install the SSL which was mentioned 3 times before hand as well as in the contract in keeping a safe and secure environment.
- September 23rd 2019 you stated **you** had mis installed the SSL, and then requested our help to generate and install on our end, despite hard efforts it was impossible to do due to us having an issue with OpenSSL a company which isn't ours but merely a program which has no reflection to this contract.
- We attempt to come up with a resolution, you were absent for a few days and then magically an email stating "service" termination,
- October 6th, 2019 your website is still not completed.

Please See Page 3.

PLEASE TAKE FURTHER NOTICE that unless the breach is remedied within 45 days of this letter's date, we will take action to protect our rights under the Contract and under any applicable law.

Unless and until these issues are resolved, we formally place Purest Form CBD on notice of legal requirements concerning document retention and expect Purest Form CBD and all its affiliates to honor such requirements. Purest Form CBD has a legal obligation to maintain and preserve any and all documents, materials, and information, in any form whatsoever, that may be potentially relevant to the subject matter of, or discoverable in any potential action arising from, this breach.

Exhibit 79



Consequently, we hereby request a good faith response to this letter as soon as possible, but in no event later than the close of business on Friday, November 22, 2019. If by such time we have received no response from Purest Form CBD, Red Thread Tech LLC and partners expressly reserve the right to pursue any and all available legal and equitable remedies, including, but not limited to, instituting formal litigation proceedings against Purest Form CBD, and this letter is without prejudice to any other rights or remedies available to Red Thread Tech LLC.

All of Red Thread Tech LLC's or any partners rights are reserved under this notice.

Please See Page 4.

PLEASE TAKE FURTHER NOTICE that unless the breach is remedied within 45 days of this letter's date, we will take action to protect our rights under the Contract and under any applicable law.

Unless and until these issues are resolved, we formally place Purest Form CBD on notice of legal requirements concerning document retention and expect Purest Form CBD and all its affiliates to honor such requirements. Purest Form CBD has a legal obligation to maintain and preserve any and all documents, materials, and information, in any form whatsoever, that may be potentially relevant to the subject matter of, or discoverable in any potential action arising from, this breach.

The documents that Purest Form CBD should preserve include, without limitation, any and all such documents, materials, server information and information produced, created, or transmitted during the course of time since Purest Form CBD and Red Thread Tech LLC entered into contract including any e-mails and or text messages that led to the entrance of contract and acceptance. A list is displayed below.

- E-mails
- Text Messages
- GoDaddy Server & Server Logs
- WooCommerce Database & WordPress Database
- Communications from GoDaddy Support Team
- WordPress Core Files
- WooCommerce Core Files

Consequently, we hereby request a good faith response to this letter as soon as possible, but in no event later than the close of business on Friday, November 22, 2019. If by such time we have received no response from Purest Form CBD, Red Thread Tech LLC and partners expressly reserve the right to pursue any and all available legal and equitable remedies, including, but not limited to, instituting formal litigation proceedings against Purest Form CBD, and this letter is without prejudice to any other rights or remedies available to Red Thread Tech LLC.

All of Red Thread Tech LLC's or any partners rights are reserved under this notice.

Please See Page 4.

Red Thread Technology

It is hopeful that a mutually acceptable resolution outside of a publicly filed litigation can be achieved.

Please contact us via e-mail at your earliest convenience if you have any questions.

Sincerely,

Company Officer: Seth Aikens II

Support and Maintenance

The Development Company may elect to provide maintenance, support and other services in its sole discretion, and may terminate such support at any time without notice to Client. THE SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT. IN NO EVENT SHALL THE DEVELOPMENT COMPANY, AUTHORS OR COPYRIGHT HOLDERS BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING FROM, OUT OF OR IN CONNECTION WITH THE SOFTWARE OR THE USE OR OTHER DEALINGS IN THE SOFTWARE.

Impossibility of Performance

Neither party to this Agreement shall be deemed to be in violation of this Agreement if it is prevented from performing any of its obligations hereunder for any reason beyond its control, including without limitation, acts of God or of the public enemy, flood or storm, strikes or statutory regulation or rule of any federal, state, or local government, or any agency thereof.

Waiver of Jury Trial

The parties waive their respective rights to trial by jury in any action or proceeding involving this agreement or the transactions relating to its subject matter and understands Arbitration would be used.

Severability

Any part, provision, representation or warranty of this Agreement, which is prohibited, or which is held to be void or unenforceable shall be ineffective to the extent of such prohibition or enforceability without invalidating the remaining provisions hereof. Any part, provision, representation or warranty of this Agreement which is prohibited or unenforceable or is held to be void or unenforceable in any jurisdiction shall be ineffective, as to such jurisdiction, to the extent of such prohibition or enforceability without invalidating the remaining provisions hereof, and any such prohibition or enforceability in any jurisdiction as to any service shall not invalidate or render unenforceable such provision in any other jurisdiction. To the extent permitted by applicable law, the parties hereto waive any provision of law which prohibits or renders void or unenforceable any provision hereof. If the invalidity of any part, provision, representation or warranty of this Agreement shall deprive any party of the economic benefit intended to be conferred by this Agreement, the parties shall negotiate, in good-faith, to develop a structure the economic effect of which is nearly as possible the same as the economic effect of this Agreement without regard to such invalidity. If any part of this agreement is declared unenforceable or invalid, the remainder will continue to be valid and enforceable.

UNITED STATES DISTRICT COURT
for the
Western District of Pennsylvania

In the Matter of the Search of
(Briefly describe the property to be searched or identify the person by name and address)
60 Rocky Grove Lane, Crown, PA 16220

Case No. 22-750

[UNDER SEAL]

WARRANT BY TELEPHONE OR OTHER RELIABLE ELECTRONIC MEANS

To: Any authorized law enforcement officer

An application by a federal law enforcement officer or an attorney for the government requests the search and seizure of the following person or property located in the Western District of Pennsylvania *(identify the person or describe the property to be searched and give its location)*:

Please see Attachment A, Incorporated herein

I find that the affidavit(s), or any recorded testimony, establish probable cause to search and seize the person or property described above, and that such search will reveal *(identify the person or describe the property to be seized)*:

Please see Attachment B, Incorporated herein

YOU ARE COMMANDED to execute this warrant on or before June 6, 2022 *(not to exceed 14 days)*

☑ in the daytime 6:00 a.m. to 10:00 p.m. ☐ at any time in the day or night because good cause has been established.

Unless delayed notice is authorized below, you must give a copy of the warrant and a receipt for the property taken to the person from whom, or from whose premises, the property was taken, or leave the copy and receipt at the place where the property was taken.

The officer executing this warrant, or an officer present during the execution of the warrant, must prepare an inventory as required by law and promptly return this warrant and inventory to Duty Magistrate Judge.
(United States Magistrate Judge)

☐ Pursuant to 18 U.S.C. § 3103a(b), I find that immediate notification may have an adverse result listed in 18 U.S.C. § 2705 (except for delay of trial), and authorize the officer executing this warrant to delay notice to the person who, or whose property, will be searched or seized *(check the appropriate box)*

☐ for ____ days *(not to exceed 30)* ☐ until, the facts justifying, the later specific date of ____________.
